WORKSHOP WORKING SESSION

Scopus AI Sandbox: Faculty Checklist

Instructions: Choose 2-3 prompts below that align with your discipline, or use them as inspiration to create your own. Enter them into Scopus AI and critically evaluate the generated Topic Summary, Concept Map, and Foundational Documents.

Category 1: Broad Concept Mapping

Test how well Scopus AI synthesizes a wide-ranging pedagogical topic and visualizes related sub-fields.

- "What are the impacts of trauma-informed pedagogy on student retention in secondary education?"
- "How does generative AI literacy affect preservice teacher training programs?"
- "What is the relationship between social-emotional learning (SEL) and academic achievement in early childhood?"

Evaluation Question: Does the Concept Map generate accurate keywords you would actually want your students to use in a traditional database search?

Category 2: Identifying Foundational Literature

Test if the AI correctly identifies the seminal works and leading voices you already know in your field.

- "What are the foundational theories supporting Universal Design for Learning (UDL) in higher education?"
- "Identify seminal research on bilingual education policy and English language learner (ELL) outcomes."
- "What are the major theoretical frameworks used to study teacher burnout and retention?"

Evaluation Question: Look at the "Foundational Documents" section. Did it pull the authors and papers you would expect a graduate student to cite?

Category 3: Edge Cases and Limitations

Test the boundaries of the tool to see how it handles highly niche, recent, or overly specific queries.

- "What is the impact of ChatGPT on elementary mathematics instruction since 2024?" (Testing recent/sparse data)
- "Critique the methodology of recent studies on flipped classrooms in middle school science." (Testing for evaluation vs. summary)

Evaluation Question: When the AI lacks enough data, does it hallucinate, or does it responsibly admit its limitations based on available abstracts?

Category 4: The "Student Pathway" Test

- Type in a poorly phrased, overly broad prompt a freshman might use: *"Is technology good for schools?"*

Evaluation Question: How well does Scopus AI guide the user toward a more narrow, academic focus using the "Go deeper" suggested questions?
