Teach for Integrity

Teaching for learning integrity — not just academic integrity — in the age of AI

Megan Alstot, Ph.D. · Academy for Teaching & Learning

Faculty Workshop · Thursday, July 23, 2026 · Zoom

One hour, one big topic, one thing you can use tomorrow

This is the start of a conversation, not the last word. Sixty minutes can't solve AI and integrity — so my goal is simpler and real: everyone leaves with one thing they can try tomorrow.

Reframe the challenge

From “stop cheating” to teaching for learning integrity.

See why students misuse AI

The eleven reasons — and why they cluster on values and context.

Leave with practical moves

Seven small teaching moves, tagged to the reasons they address.

Take home a toolkit

A gift page of ready-to-use tools — with time to try them.

We'll save the last 10–15 minutes for you to open the toolkit, click around, and ask questions.

Where are you with AI — in your course?

Chat Poll

Put your number in the chat.

Hesitant — I'd rather AI stayed out of my course

Confident — AI already has a seat in my course

The frame for this hour: HITL² — Humans in the Learning Loop

You're a human in a learning loop, teaching humans in your learning loops — and every one of us is figuring out how to learn in an AI-integrated loop. Together.

Fluency doesn't presume AI should be used—full stop. Fluency is about a way of thinking or a mind shift in if, when, and how to integrate AI.

A note before we go further.

“You didn't ask for AI to arrive at our educational doorstep. .

■

You didn't ask for an unregulated, untested, unreliable, untraceable, and unrelenting technology to upend education... it is clear the genie is out of the bottle... it is not going back in nor is it going to slow down for us to catch up” (Ludwig & Zakrajsek, 2026, p. 3).

Neither did your students.

— *With language from Ludwig & Zakrajsek (2026), The Science of Learning Meets AI*

Start with the 4Ds of AI Fluency

DELEGATION

Setting goals and deciding whether, when, and how to engage AI.

DESCRIPTION

Describing your goals clearly enough to prompt useful AI behavior.

AI FLUENCY

effective · efficient
ethical · safe

DISCERNMENT

Accurately assessing the usefulness of AI outputs and behaviors.

DILIGENCE

Taking responsibility for what we do with AI — and how we do it. Responsibility rests with the human.

Your scholarship already lives inside the Ds

These aren't new to how scholars think. AI is a new information source — the threshold to get it to produce anything is low, but to get it to produce effectively takes sophisticated information fluency: a way of thinking, not just a way of doing.

Delegation & Discernment — *the questioning stance*

“Should I use AI for this? What's my goal? Did I get what I sought? What should I adjust? Am I asking a leading question?”

Description — *direction-giving*

Prompting isn't just asking good questions — it's directing. It's how you operationalize delegation.

Diligence — *responsibility*

Scholarly accountability and disclosure — owning what you do with AI and how.

Teach students to think like scholars — so they become ethical, responsible thinkers AND innovative creators. *The goal isn't just agency. It's critical agency.*

A continuum, not a scale

REFLECT · LINK IN CHAT

Every point is a real choice

A scale implies higher is better. A continuum refuses that — value lives at every point when the placement is intentional and justified by your kernel of cognition.

“No AI” means the assignment, not the course.

An AI-free course isn't feasible or inclusive — it would rule out OneSearch's AI-powered search and the assistive tools many students, including neurodivergent learners, rely on. Name AI-free assignments, and be precise about what “AI” means.

Supports MLO A4.1–A4.2 (the five levels, how they build, and the AI literacy each develops). AI-literacy focus adapted from the IWU N&G AI Literacy and Integration Scale (Bleistein & Snyder, EDUCAUSE Review, 2026); continuum adapted from the IWU 5-Level AI Literacy Continuum (Indiana Wesleyan University).

Cheating has always existed. AI changed how — not why.

Policing asks:

“How do I catch them after?”

- Surveillance, suspicion, detection tools
- Exhausting — and error-prone with AI
- Erodes the relationship that prevents cheating

Teaching for integrity asks:

“What invites the shortcut — and how do I design it out?”

- Conversation, early and often
- Clarity about the line, and the why behind it
- Design that makes thinking visible

Bertram Gallant & Rettinger (2025)

The real struggle isn't “academic integrity.” It's learning integrity. *We want students to learn — so the charge is to teach for integrity: learning and academic.*

Eleven reasons students compromise their learning integrity

From The Opposite of Cheating (ch. 1), grouped by the instructional response they share.

Same reasons students have always cheated — AI just changed how. In the chat: which one lives in your courses?

Each reason, in one line

Self-efficacy — Doubts they can succeed, so reaches for a shortcut.

Expectations — One instructor's “AI feedback” is another's “plagiarizing AI.”

Values — The task feels disconnected from what they came for.

Motivation — Playing for the grade, not the learning.

Procrastination — Out of time; AI is the only door still open.

Cost-benefit — Weighs it: high upside, low chance of getting caught.

Moral disengagement — Rationalizes it — “everyone does it.”

Contract cheating — Hands the work to someone — or something — else.

Peer effects — Takes cues from what the class treats as normal.

Narcissism — Acts as if the rules are for other people.

Instructor effects — Doesn't feel the instructor knows or cares.

Why this matters beyond any one assignment

So — where do we start?

Institutions are part of this assemblage too, and faculty deserve real institutional support. That's true — and it's not today's scope.

Today we work inside YOUR sphere of influence — leaning on what you already do well, with the knowledge and tools you have right now.

Teachers hold real but partial agency within institutional structures (Fawns, 2022).

THE PRACTICAL PART

Seven small teaching moves

Each is an integrity builder for specific reasons. Pick ONE to try this term — the rest live in your gift.

1 Low-lift moves

2 Name the kernel

3 Place on the continuum

4 RADAR — student rails

5 Stress test

6 Let AI help you redesign

7 Develop & place your policy

Non-technical, low effort, biggest net. “Talk is cheap” — discursive moves are the lower long-term lever (Corbin et al., 2025) — but they're the easiest on-ramp, and at Baylor a real conversation lands. Start here to build trust; AI helps you get structural (Moves 5–6).

Learner survey

Meet students week one: names, goals, how they already use AI.

Integrity conversation

A real talk about integrity when the first higher-stakes task is set.

Integrity nudges

Reminders at announcement and just before the due date.

Grace period

One no-questions 48-hour extension (cap the uses). — Clobes, CSUCI

Withdraw & take the 0

24 hours to pull a submission, no questions — restores moral agency. — Bowen & Watson, 2025

Builds against the widest net — 8 of the eleven (self-efficacy, expectations, motivation, procrastination, cost-benefit, moral disengagement, peer & instructor effects).

Name the kernel of cognition

The thinking, growing, and learning an assignment exists to build — the part only the student can do.

Write one sentence at the top of the assignment, for you AND for them:

“The thinking this assignment exists to build is ____.”

Two payoffs: every AI decision downstream gets easier — and the kernel is what justifies where the assignment sits on the continuum. AI that enhances the kernel is welcome; AI that surrenders it is the line.

Builds against: **Values** **Motivation**

Place the assignment on the continuum

With the kernel named, decide where this assignment should sit — and why.

Use the continuum as a reflective tool (it's in your gift). Where do you WANT this assignment to sit — and does the kernel justify it?

Remember: every level is a real choice when it's intentional. “AI-Free Assignment” isn't the low end — it's the correct level for a given kernel. And it's an assignment-level choice, never a course-wide ban.

Where an assignment sits decides which rails it needs next.

Builds against: **Expectations**

A student-facing prompting scaffold that keeps students working within the continuum level you set. It's how they operationalize Delegation and Description.

R Your role

"I'm a graduate student working on [assignment]..."

A AI's role

"Act as a peer reviewer / study coach / research librarian."

D Describe the task

What you're working on — and the sources or notes to use.

A Action to delegate

"Flag gaps / generate questions / check my logic — [the specific ask]."

R Rails — the guardrail

"Don't write it for me. Flag, don't fix — I'll decide. Ask before you suggest."

The last R is where integrity lives — the rail students set before they ask.

Builds against: **Expectations** **Moral disengagement**

Stress test the assignment

Meet your assignment on your students' worst day — before they do.

Paste your assignment into the Assignment Integrity Stress Test: seven students, each on a bad day, built from the eleven reasons.

It diagnoses; it does not fix. You get a misuse-pressure report and a question back: which weakness do you want to work on, and how? The reading of the diagnosis — and what to change — stays yours.

It shows you two things at once: what guardrails this assignment needs, and what you may need to teach to get students to the continuum level you want.

Builds against: **all eleven — it diagnoses**

Let AI help you redesign — on your terms

Now act on the diagnosis. Design work is where AI is strongest and your kernel isn't at stake. AI proposes; you decide. Four copy-ready prompt starters:

Make thinking visible

Break the assignment into low-stakes checkpoints that surface student thinking.

Discipline scenarios

Generate realistic ethical dilemmas about AI use in your field for discussion.

Mine your objectives

Where are ethics nested in your learning objectives — and what real-world outcomes?

Rethink the form

Alternatives to the current format, and how each changes the integrity pressure.

This is where the structural changes “Talk is cheap” calls for get built — scaffolding, redesigned assessments — with AI making the leap feasible.

Builds against: **whatever the diagnosis surfaced**

Develop your policy — and place it, and discuss it

Once the assignment is settled, write your rail. This is faculty-facing — your policy, not the student prompt.

Write it: start from the Guardrail Starters — rails keyed to your continuum level, each with a student-facing why.

Place it: in the assignment brief, not just the syllabus. Silence reads as permission, so the rail belongs where temptation happens.

Discuss it: orient students to it early, as conversation — sync or async. “When unsure, ask — asking is never a violation.”

Builds against: **Expectations** **Moral disengagement**

Your gift — let's open it together

10–15 MIN • LINK IN CHAT

1 Learner survey + low-lift moves

Copy the survey; pick one low-lift move for tomorrow.

2 Continuum + Guardrail Starters

Place an assignment; get rails keyed to its level.

3 Assignment Integrity Stress Test

Paste an assignment, meet your seven bad days.

4 Design prompts + Eleven Reasons

Redesign starters and the full mentoring matrix.

gifts/moody-2026](https://malstot.github.io/gifts/moody-2026)

Now: open it and click the tool that matches your move. This is your protected time — try something, ask questions. The page is yours to keep, share with your team, and come back to all term.

Keep the human in the learning loop.

This hour was the start of a conversation. Leave with one thing — and know where to find me for the rest.

In the chat: the ONE move you'll try this term.

That's what I'm here for. Consultations · small-group sessions · workshops built for your unit or team.

megan_alstot@baylor.edu

Best of luck — build a community, and keep talking.
